

# NovaSuite Service Level Agreement (SLA) Policy

Effective Date: June 2026

## 1. Overview

This Service Level Agreement ("SLA") defines the core performance and availability standards for NovaSuite's cloud platform. NovaSuite is committed to providing a reliable, enterprise-grade software-as-a-service (SaaS) platform to all subscription tiers. This document details our service level targets, credit eligibility, and incident response procedures.

## 2. Uptime Commitment

NovaSuite guarantees a Monthly Uptime Percentage of at least 99.9% for all production environments. "Monthly Uptime Percentage" is calculated by subtracting from 100% the percentage of minutes during the month in which the platform was in a state of "Unscheduled Downtime".

Unscheduled Downtime is defined as any period where the NovaSuite API or core web application is completely inaccessible or unresponsive to requests, excluding:

- Planned Maintenance windows (announced at least 48 hours in advance)
- Force Majeure events (natural disasters, regional network outages, etc.)
- Outages caused by client integrations or custom configurations
- Issues with third-party networks or client internet service provider failures.

## 3. SLA Credit Policy

If NovaSuite fails to meet the 99.9% uptime guarantee in a given calendar month, clients are eligible to request service credits applied against their next billing cycle. Service credits are calculated as a percentage of the total monthly subscription fee paid by the client:

- Uptime < 99.9% but >= 99.5%: 10% credit of the monthly fee.
- Uptime < 99.5% but >= 99.0%: 25% credit of the monthly fee.

- Uptime < 99.0%: 50% credit of the monthly fee.

To claim service credits, clients must submit a formal ticket to the billing department within thirty (30) days of the end of the month in which the outage occurred. Claims must include date, time, and logs demonstrating the downtime.

#### 4. Incident Response Timelines

NovaSuite classifies platform incidents into four severity levels to prioritize engineering resources and communicate status update reports:

- Severity 1 (P1) - Critical: Core system is completely down, affecting all users. Response target: under 15 minutes. Update frequency: every 30 minutes. Resolution target: 4 hours.
- Severity 2 (P2) - High: Key features are unavailable with no workaround. Response target: under 30 minutes. Update frequency: every 2 hours. Resolution target: 8 hours.
- Severity 3 (P3) - Medium: Minor bugs or performance degradation with a workaround. Response target: under 4 hours. Update frequency: daily. Resolution target: 3 business days.
- Severity 4 (P4) - Low: General questions or cosmetic issues. Response target: under 24 hours. Update frequency: as needed.

Our dedicated Site Reliability Engineering (SRE) team is on-call 24/7/365 to handle P1 incidents. Escalation procedures are automatically triggered when monitoring tools detect an outage.
